EXAMINER

GAUTHIER, GERALD

ART UNIT PAPER NUMBER

2645

DATE MAILED: 12/09/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/008,887

Applicant(s)

MOON, JEONG-KYU

Examiner

Gerald Gauthier

Art Unit

2645

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 August 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. **Claims 1-9** are rejected under 35 U.S.C. 103(a) as being unpatentable over Whalen et al. (US 5,948,066) in view of Warsta et al. (US 5,896,369).

Regarding **claim 1**, Whalen discloses a network access control method in a mobile communication terminal with a built-in web browser (column 1, lines 6-9), comprising the steps of:

- (a) upon receipt of an access request from a user, accessing a web server through a network (column 3, lines 38-67) [The mobile user opens a URL, the browser 12 submits an HTTP request to the mobile client 10 which in turn accesses the fixed server over the narrow-band communication link];
- (b) displaying a web document from the web server (column 4, lines 33-36) [The HTML page document is made available to the browser 12 to be properly display to the mobile user];
- (c) upon receipt of an operation command from the user, while displaying the web document, performing an operation according to the operation command

(column 7, lines 16-28) [The mobile user can quickly access the general information and has the opportunity to cancel the request or submit a different request before the completion of the page to be completed by the mobile client 10]; and

(e) repeating step (a-d), (column 7, lines 16-28) [The general information of the mobile client 10 gives the mobile user an opportunity to submit a different request repeating steps a-c].

Whalen discloses allowing the mobile user to cancel the request but fails to disclose temporarily releasing an access to the network, upon failure to receive any web related operation command from the user for a predetermined time after displaying the web document.

However, Warsta teaches temporarily releasing an access to the network, upon failure to receive any web related operation command from the user for a predetermined time after displaying the web document (column 6, lines 11-32) [The remote workstation 4 software releases the connection automatically when a sufficiently long break at a predetermined period of time, has occurred in the data communication].

It would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify Whalen using the releasing of access to the network, upon a predetermined period of time as taught by Warsta.

This modification of the invention would offer the capability of temporarily releasing an access to the network after a predetermined period of time so that the system would not allocated the radio resources during silent periods.

Regarding **claim 2**, Warsta teaches determining if the web related operation command has been entered by the user (column 6, lines 11-32);

determining whether the predetermined time has elapsed (column 6, lines 11-32); and

upon failure to receive the web related operation command from the user before a lapse of the predetermined time, temporarily releasing the network access to the web server to enable the mobile communication terminal to receive an incoming call (column 6, lines 11-32).

Regarding **claim 3**, Whalen disclose upon receipt of the web related operation command from the user, repeating step (a) (column 7, lines 16-28).

Whalen fails to disclose upon receipt of a network access end request from the user, releasing an access to the network.

However, Warsta teaches upon receipt of a network access end request from the user, releasing an access to the network (column 5, lines 63-67).

It would have been obvious to one of the ordinary skill in the art at the time the invention was made to use upon receipt of a network access end request from the user, releasing an access to the network of Warsta to modify the Internet origin host of Whalen.

The modification of the invention would offer the capability of upon receipt of a network access end request from the user, releasing an access to the network such as the system would not allocated the radio resources during silent periods.

Regarding **claim 4**, Warsta teaches releasing an access to the network upon receipt of a network access end request from the user in step (d) (column 5, lines 63-67).

Regarding **claim 5**, Whalen discloses wherein the predetermined time is set by the user (column 3, lines 38-67).

Regarding **claim 6**, Whalen discloses wherein the web related operation command is issued when the user inputs a URL, clicks a hyperlink on the displayed web document, or refreshes a displayed web document (column 3, lines 38-67).

Regarding **claim 7**, Whalen discloses wherein the network is the Internet (column 2, lines 56-67).

3. **Claims 8-9** are rejected under 35 U.S.C. 103(a) as being unpatentable over Whalen in view of Warsta and in further view of Phillips et al. (US 6,763,015 B1).

Regarding **claim 8**, Whalen and Warsta disclose all the limitations of **claim 8** as stated in **claim 1**'s rejection but fails to disclose the terminal including a controller, a memory, an input and a display means, an audio and a video processor, a signal transmitter, a receiver and a duplexer, and having a built-in web browser.

However, Phillips teaches the terminal including a controller (42 on FIG. 2); a memory (94 on FIG. 3), an input and a display means (102 on FIG. 3), an audio and a video processor (92 on FIG. 3), a signal transmitter (62 on FIG. 2), a receiver and a duplexer (64 on FIG. 2).

It would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify Whalen using the mobile terminal as taught by Phillips.

This modification of the invention would offer the capability of using the mobile terminal of Phillips so that the user would make multiple calls in the network.

Regarding **claim 9**, Whalen discloses wherein the network is the Internet (column 2, lines 56-67).

Response to Arguments

4. Applicant's arguments filed on August 10, 2004 have been fully considered but they are not persuasive.

The applicant's remarks on page 2 stated that Warsta does not teach "temporarily releasing an access to the network".

The examiner respectfully disagrees.

Warsta (column 6, lines 11-32) teaches an automatic release of the mobile terminal from the network after a predetermined period of time and the re-establishment of the connection to the network when needed. This limitation described a temporary release of the communication of the network therefore meets the claimed limitation.

Conclusion

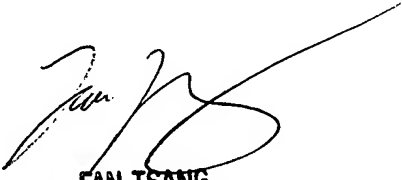

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gerald Gauthier whose telephone number is (703) 305-0981. The examiner can normally be reached on 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Fan Tsang can be reached on (703) 305-4895. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
